MARINE GRADE FIBERGLASS

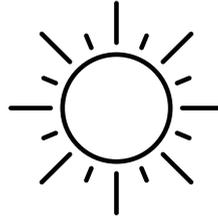

The marine grade fiberglass in our products is a composite material that provides unrivaled performance and durability in all weather conditions. Premium quality polyester resin is combined with glass fibers to create a material that is as strong and reliable as traditional materials like stone but much lighter in weight. The superior strength-to-weight ratio of fiberglass enables our craftsmen to hand craft innovative designs of all shapes and sizes that can be installed, lifted and carried with ease. Resistant to UV, frost and a range of other weather conditions, marine grade fiberglass is ideal for use outdoors in any climate, from a sunny tower rooftop in Dubai to a New York balcony in winter.

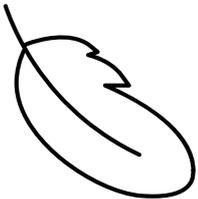

FROST-RESISTANCE

Products made of fiberglass are inherently frost-resistant and can expand and contract during cold winter months due to their general elasticity.

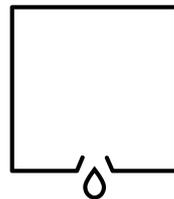

UV-RESISTANCE

Each planter is expertly finished by our post-production team using UV-resistant automotive paint and is protected against extended exposure to harsh sunlight.

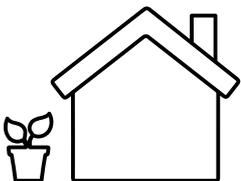

LIGHTWEIGHT

Most of our planter designs are light enough to be picked up single handedly and installed with ease anywhere you see fit.

DRAINAGE

With the option of including or drilling your own drainage holes, our pots are suited for indoor as well as outdoor use.

OUTDOOR-READY

Weather resistant finishing with an incredibly strong build allow our products to last outdoors for years on end without losing quality.

INDOOR-READY

Perfect to define a space in offices and hotel lobbies, our pots are ready for the indoors and will not leak water on floors.

DURABLE LIGHTWEIGHT HAND-MADE

The flexibility and strength of fiberglass allows for the production of marine, automobile, and complex commercial structures. Each of our unique designs can last for years with proper care and maintenance while preserving the plant life it houses. Our experience in industrial design guarantees that each product is engineered for quality and tough enough to withstand extreme weather conditions without compromising their integrity or beauty.

TAU Natural Range

Our **Natural Range** is flawlessly smooth and its coating is hand-finished to the highest quality. Available in a range of colors, the Natural Range adds a touch of contemporary elegance to any space.

TAU Urban Range

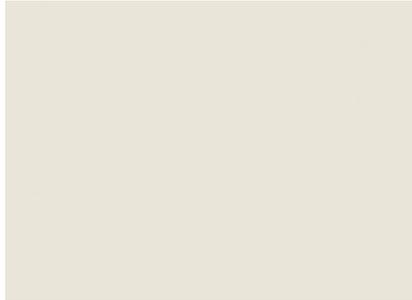

The **Urban Range** resembles cement with its unevenly textured feel and surface pores giving a uniquely visible appearance. Available in a core of natural color themes, the Urban Range blurs the boundaries between traditional and contemporary: the timeless look of concrete at a fraction of the weight.

MORE LIFE, LESS EFFORT

Suspended from the rim of our planters, these self-watering kits provide a constant supply of water while reducing the amount of soil required, making your planter significantly lighter. They offer a flexible growing space without taking up much room.

Each set includes a grow pot and an integrated watering mechanism, perfectly molded to fit your TAU planter and maintain its elegant design. These compatible models can be easily identified by the ".SW" extension at the end of their model number.

EARTH & ARTISAN RANGES

TAU Rough Cast Range

The **Rough Cast Range** embodies the unrefined beauty of natural materials. With its raw texture and organic surface variations, this finish evokes the feel of weathered stone or hand-troweled earth. Subtle imperfections and tonal depth give each piece a distinctly handcrafted character, making it a perfect fit for both modern minimalism and rustic environments. Whether used in interior or exterior settings, Rough Cast planters add grounded elegance and timeless texture to any space.

TAU Stone Range

The **Stone Range** captures the quiet elegance of natural carved stone, featuring a softly striated surface with subtle texture and tonal depth. This refined finish offers a clean, architectural feel while maintaining the organic warmth of hand-worked material. Ideal for projects that call for understated luxury, the Stone Range brings a sense of calm, balance, and timeless sophistication - equally suited to contemporary and traditional settings.

TAU TOUCH UP KIT

DIRECTIONS TO USE

Clean the Area:

Start by thoroughly cleaning the damaged area with soap and water. Use a wax and grease remover if needed to ensure the surface is free of dirt, wax, or grease.

Sand the Area:

If the chip or scratch is deep, lightly sand the area with fine-grit sandpaper (like 320-grit) to smooth out any rough edges. Wipe away any dust with a clean cloth.

Mix and Shake the Paint:

Mix the paint with the hardener, then shake thoroughly to ensure the mixture is even and ready for application.

Apply the Paint:

Using the applicator, apply the touch-up paint in thin layers over the damaged area. Start with one light coat and allow it to dry before applying additional layers if needed. Avoid overloading the area with paint.

Let it Dry:

Allow the paint to dry completely between coats. Drying times will vary based on the paint type and environmental conditions.

Buff the Area:

After the paint has fully dried, gently buff the area with a polishing compound to blend the touch-up paint with the surrounding surface. This helps to achieve a smooth, even finish.

Wax the Area:

Finally, apply a layer of car wax to the repaired area to protect the new paint and give it a polished look.

WINTERPROOF. FROST-PROOF. FROST-RESISTANT. WHAT DOES IT ALL MEAN?

When it comes to planters there's one thing you should know: when freezing water expands, it can even cause steel (i.e. heating and water pipes in house walls) asphalt and iron to burst. Materials and processing play a crucial role in the durability of planters, but the right handling and care are also essential.

WINTER CARE

The best plan is to store both the plant and the pot in a dry, sheltered place. If the plant is hardy and is to be left outside, please note the following: Containers that remain outdoors during the winter months need a drainage hole. Please ensure the container is drained properly. As an alternative, cover the drainage hole with a layer of expanding clay and fiber fleece. Otherwise snow and rainwater will remain in the container and turn into ice and expand when temperatures drop below zero. This may cause the container to shatter. We recommend placing containers under a covered location where you can determine the amount of water. If the containers are not equipped with integrated bases, support the containers with separate bases. Otherwise the container may become fastened to the level surface on which it is placed through the capillary force of the roots which may cause frost damage to parts touching the ground. During winter months, trays have to be removed or turned over to prevent any ice from forming, which in turn may cause the container to shatter. Take care to prevent water from gathering in empty receptacles. It is best to store all empty containers indoors, turn them upside-down or cover them.

PRODUCT CARE

Always make sure your planters are well drained. The planters may be cleaned with water and a soft cloth, if required. Avoid using aggressive chemicals or mechanical cleaning agents, such as bleach, high-pressure cleaners or hard brushes, which might affect or damage the finish. All our products have an automotive finish applied to them which needs to be cleaned regularly. Applying an automotive wax to the surface will prolong the finish, however like a car the color may gradually become less vibrant over time when exposed to sunlight. Ensure that your plant containers are very clean before applying an automotive wax to its surface. Unless requested at the time of placing your order, planters do NOT have drainage holes pre-drilled. Standard felt pads will protect delicate surfaces against scratching. It is very important to only use potting soil formulated for planters and container gardening. This is usually, but not always, a mixture of soil and peat but can vary according to mixture. To ensure you are using the correct type of potting soil for your plant(s), check with a professional to determine the correct regional and plant specific soil to be used. Heavier soil, sand, and "earth" absorb and retain more water which can apply strong pressure to the walls of the planter and cause structural damage in large sized planters. Improper installations and other forms of misuse may void the product warranty. Do not push or pull full-planted pots by the top lip.
